Interprotect 2000VOC

PRODUCT DESCRIPTION

Interprotect 2000VOC is a unique two part epoxy coating developed to protect new and used fiberglass hulls from absorption which can lead to poor hull performance and osmotic blistering. Microplates® in Interprotect 2000VOC create an overlapping barrier to eliminate any direct path for water migration.

- * Contains Microplates® for extra protection
- * Anticorrosive substrate primer for metals

Interprotect 2000VOC is also used as a no-sand primer when painting new boats. With a VOC of less than 408 grams per liter Interprotect 2000VOC meets all VOC regulations and can be applied in any air quality management district.

PRODUCT INFORMATION

Colour Y2000V-Gray, Y2002VOC-White

Finish Matte
Specific Gravity 1.4
Volume Solids 45%

Mix Ratio 3:1 by volume (as supplied)

Converter/Curing Agent Y2001V
Typical Shelf Life 2 yrs
VOC (As Supplied) 408 g/lt
Unit Size 1 US Gallon

DRYING/OVERCOATING INFORMATION

Note: Overcoating times will vary due to wide variations in temperature and humidity. The best method is to check the paint film using the "Thumb Print" test to determine when the Interprotect 2000VOC is ready to overcoat. If the primer feels tacky and you can leave a thumb print in the paint film without getting any paint on your thumb the Interprotect 2000VOC is ready for overcoating. 30 minutes after starting, begin testing the primer. Continue testing every 15 minutes using the "Thumb Print" test until reaching the Ready-to-Overcoat stage, then begin to apply Interlux antifouling immediately. If you cannot leave a thumb print in the Interprotect 2000VOC or it is "tack free" it is too

Please refer to your local representative or visit www.yachtpaint.com for further information.

Interprotect 2000VOC

For Prevention and Repair of Gelcoat Blistering

late to overcoat with antifouling paint and must be sanded or another coat of Interprotect 2000VOC applied. The "Thumb Print" test can be used between coats of Interprotect 2000VOC and before overcoating with antifouling. Follow application instructions on the antifouling label for overcoating times of subsequent coats. Do not apply if the relative humdity exceeds 85% or if the temperature is above 95°F (35°C).

APPLICATION AND USE

Preparation BARE FIBERGLASS Remove all surface contamination using Fiberglass Surface Prep YMA601, flush with fresh water.

Sand with 80 grade (grit) paper. Remove sanding residue. Wipe with Fiberglass Solvent Wash 202.

Epiglass Epoxy Resin HT9000 Clean with Fiberglass Surface Prep YMA601. Rinse with fresh water and allow to dry.

Sand with 80 grade (grit) paper. Remove sanding residue. Wipe with Fiberglass Solvent Wash 202.

BARE METAL Surface should be blasted to bright metal. Remove all blast or sanding residue using a clean air line and sweeping with a clean brush or broom. Vacuum clean for best results. Apply primer within 1 hour of metal preparation. If blasting is not possible (or if more than 2 hours has passed since blasting) sand or grind with coarse emery cloth and

apply Viny-Lux® Primewash 353/354 prior to Interprotect 2000VOC or Interprotect 3000/3001.

Method Apply enough Interprotect 2000VOC to reach a final Dry Film Thickness of 10 mills. This usually takes 4-5 coats but the

amount of paint is more important than the number of coats. Mix only as much as you can use in the stated pot life.

Hints Mixing Ensure the correct volume mix ratio is used. Mix thoroughly together and then allow to sit 20 minutes for

induction time

Cleaner Fiberglass Solvent Wash 202.

Airless Spray Pressure: 165 bar/2400 psi. Tip Size: 0.44-0.53 mm/17-21 thou.

Conventional Spray Pressure Pot: Pressure: 3.44-4.47 bar/50-65 psi (gun pressure); 10-15 psi (pot pressure). Tip Size: 1.5-1.8 mm/60-70 thou. Siphon Cup: Pressure: 3.44-4.47 bar/50-65 psi gun pressure. Tip Size: 1.8-2.2 mm/70-85

thou.

Brush Use a natural bristle brush.

Roller Use a 3/8" nap solvent resistant roller.

Other To figure out how much paint is necessary, calculate as follows: Wetted Surface Area (WSA) = LOA x Beam x 0.85 Then divide the WSA by 60 when brushing/rolling or 45 when spraying to determine the number of gallons necessary to reach 10 mils. Prior to application of Interprotect 2000VOC obtain and read the Interprotect System Manual.

Some Important Points

The hull must be dry. Do not apply over one part paints. Product temperature should be minimum 10°C/50°F and maximum

 $29^{\circ}\text{C/85}^{\circ}\text{F. Ambient temperature should be minimum } 10^{\circ}\text{C/50}^{\circ}\text{F and maximum } 35^{\circ}\text{C/95}^{\circ}\text{F. Substrate temperature should be minimum } 10^{\circ}\text{C/50}^{\circ}\text{F. Ambient temperature should } 10^{\circ}\text{C/50}^{\circ}\text{C/50}^{\circ}\text{F. Ambient temperature should } 10^{\circ}\text{C/50}^{\circ}\text{C/50}^{\circ}\text{C/50}^{\circ}\text{F. Ambient temperature should } 10^{\circ}\text{C/50}^{\circ}\text$

minimum 10°C/50°F and maximum 35°C/95°F.

Compatibility/Substrates Apply to clean, dry, properly prepared surfaces only. Do not apply over one part paints. When applying vinyl antifoulings

such as VC Offshore and Baltoplate® to Interprotect, apply an extra coat and allow epoxy to cure overnight then sand with 80 grade (grit) paper to avoid wrinkling. When overcoating with VC 17m or VC 17m Extra allow Interprotect

2000VOC to dry for 24 - 36 hours, then sand with 180-220 grit sand paper.

Number of Coats As required to reach 10 mils DFT

Coverage (Theoretical) - 243.4 ft²/gal by brush, 180 (ft²/Gal) by spray

Recommended DFT 2.6 mils dry
Recommended WFT 6.8 mils wet

Application Methods Airless Spray, Brush, Conventional Spray, Roller- Pressure Pot or Siphon Cup

TRANSPORTATION, STORAGE AND SAFETY INFORMATION

Storage TRANSPORTATION:

Interprotect 2000VOC should be kept in securely closed containers during transport and storage.

STORAGE:

Exposure to air and extremes of temperature should be avoided. For the full shelf life of Interprotect 2000VOC to be realised ensure that between use the container is firmly closed and the temperature is between 5°C/40°F and 35°C/95°F.

Keep out of direct sunlight.

Safety

DISPOSAL: Do not discard tins or pour paint into water courses, use the facilities provided. It is best to allow paints to

harden before disposal.

Remainders of Interprotect 2000VOC cannot be disposed of through the municipal waste route or dumped without

permit. Disposal of remainders must be arranged for in consultation with the authorities.

 ${\tt GENERAL: Read \ the \ label \ safety \ section \ for \ Health \ and \ Safety \ Information, \ also \ available \ from \ our \ Technical \ Help \ Line.}$

IMPORTANT NOTESThe performance of any marine paint or coating depends on many factors outside the control of International Paint

LLC., including surface preparation, proper application, and environmental conditions. Therefore, International Paint LLC. cannot guarantee this product's suitability for your particular purpose or application.
